

Proper Use of InVade[™] technology Hot Spot[™] Aerosol Foam

Each can has a 360° valve which means the can may be used in any orientation. A white fan spray actuator is pre-installed on each can. InVade[™] Hot Spot[™] Aerosol Foam is not just for drain use! The pre-installed actuator is ideal for coating scummy surfaces, such as those found behind bars, under and behind prep counters, the outsides of syrup and beverage lines, around garbage areas etc. Any scummy area, except a direct food contact surface, is fair game. It is important to remember

Reusable 24" Hose Extension Actuator

not to over focus on drains. Any crack or crevice with moisture and organic matter or thin layer of scum is a potential problem area. For injecting directly into drains and garbage disposals, the can should be inverted over the drain opening and the foam sprayed straight down. Also, there are numerous household uses (in addition to commercial uses) listed right on the side of the can. The product is great for spraying garbage bins and kitty litter boxes to prevent and destroy odors at the source, and also for removing stains and odors from carpet from spills, pet accidents and general grime.

Two 24" hose extension actuators are also included in each case. To use this actuator, the white

fan spray actuator should be pulled or gently pried off and the hose extension actuator snapped onto the can. The 24" hose extension is ideal for applying product very deep into drains, or in hard to reach areas. The hose extensions can be reused many times. Additional hose extension actuators are available from your distributor for a nominal cost.

Removing the Fan Spray Actuator

fan spray actuator should be pulled or gently pried off and the hose extension actuator snapped onto the can.
