

InVade™ bio drain

Thickened Microbial Formula for Direct Application to Drains to Eat Away Scum Where Flies Breed, and for "Sugar Snake" in Soda Drain Lines

InVade™ Bio Drain is a premium blend of microbes and citrus oil in a thickened formula that coats the sides of drains. Perfect as an add-on sale, it can be sold to your accounts, or applied by the technician, 4 oz per drain. InVade Bio Drain will eat through the scum in drains to help prevent breeding of fruit flies, drain flies, and phorid flies. The citrus oil provides extra power and a wonderful smell. For start up, the product

should be applied daily for the first week. Thereafter, one weekly dose should be sufficient.

InVade Bio Drain can also be applied in soda fountain drip tray drain lines to eat away "sugar snake" that clogs the lines. Drain odors will quickly be eliminated when InVade Bio Drain is in use.
