

InVite™

fruit fly lure

Non-Toxic Gel Lure for Small Flies

Red-Eyed Fruit Flies, Dark-Eyed Fruit Flies, Phorid Flies, Drain Flies

InVite™ Fruit Fly Lure gel is the quick, easy way to trap and monitor small flies at minimal cost. Packaged in a standard size bait syringe, the gel is applied directly to glueboards of any shape and size. Results will likely be best if insect

monitors are used rather than rodent glue boards, since small flies can easily escape some rodent glue boards. Insect monitors trap flies best if the trap is folded so that the glue surface is facing down or the trap is placed on the underside of a bar or counter. A killing station can be created by using InVite Fruit Fly Lure gel on the D-Sect glueboard and then wiping the station with a micro-encapsulated residual or non-repellant. Flies that land on the station will pick up the residual and die even if they don't get trapped. **Label and MSDS is available at www.rockwelllabs.com.**
