## kil zone

### Potent Liquid Attractant for House Flies and Other Filth Flies

**InVite™ Kil Zone™** is an innovative, liquid attractant for house flies, stable flies, and blow flies. The proprietary combination of 17 ingredients includes pheromone, food, and breeding site attractants, but does not have an overbearing smell. A "kill zone" can be created by spraying a surface such as the side of a dumpster with InVite Kil Zone and then spraying over it with a micro-encapsulated residual or non-repellant. Flies are attracted to the zone and land on the residual and die.

InVite Kil Zone is ideal for use outdoors on or around dumpsters and loading docks. Also, InVite Kil Zone can be used just inside dock doors or other entry points to inhibit flies from invading the building. It may also be sprayed inside light traps to increase speed of capture. InVite Kil Zone can also be used in the Yellow PFT Station or other jar traps, for trapping flies without the use of pesticides. **Label and MSDS is available at [www.rockwelllabs.com](http://www.rockwelllabs.com).**

**Product Code:**  
**IKZC032 - Quart bottle  
with trigger sprayer**
